## SUGGESTED CITATION

U.S. Burean of the Census. U.S. Census of Agriculture: 1959. Volume V

Special Reports, Part I.-Horticultural Specialties
U.S. Government Printing Office, Washington, D.C., 1962

For sale by the Superintendent of Doxuments, 1.s. Govermment Printing Office, Washington 25, I. ( $\because$ or any of the Field Offices of the Department of Commerce. Irrice $\$ 3.50$ (paper cover)

## PREFACE

Volume V, Special Reports, is one of the final volumes presenting the results of the 1959 Census of Agriculture. Part I, "Ilorticultural Specialties," presents the results of the 1959 Special Census of Horticultural Specialties, It is comprised of six sections as follows:

Section I.-Establishments, Sales and Purchases, Employment, and Structures and Equipment
Section II.-Cut Flowers, Flowering and Foliage Plants (including Cacti and Succulents), Bedding Plants, and Cultivated Florist Greens
Section III. - Nursery Products
Section IV.-Bulb Crops
Section V.-Flower Seed
Section VI.-Vegetables Grown Under Glass and Propagated Mushrooms
The 1959 Census of IItorticultural Specialties was taken in conformity with the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13 , United States Code.

The planning of the census and the compilation of the statistics were performed under the supervision of Ray Ilurley, Chief, Agriculture Division. The technical work for this special census and the preparation of this report were performed by or under the supervision of Charles A. Nicholls, Agricultural Economist. Oakley M. Frost and Robert McGregor of the Agricultural Marketing Service of the U. S. Department of Agriculture assisted with the perfonnance of the technical work for this census. The compilation of the data was under the supervision of Lois G. Miller, assisted by Esther Engelman and Louisa Crawford. Acknowledgment is made of the assistance of the Agricultural Marketing Service in the collection of data that could not be obtained by mail.

## FINAL REPORTS

Volume I-Counties-A separate part for each State, Pucrto Rico, Guam, Virgin Islands, and American Samoa. Statistics on number of farms; farm characteristies; acreage in farms; cropland and other uses of land; land-use practices; irrigation; farm facilities and equipment; farm labor; farm expenditures; use of commercial fertilizer; number and kind of livestock; acres and production of crops; value of farm products; characteristics of commercial farms, farms classified by tenure, size, type, and economic class; and comparative data from the 1954 Census.

| VI | Livestock and Livestock Products. | XII | Type of Farm. |

Volume III-Irrigation of Agricultural Lands-Data from the Irrigation Censuses of 1959 and 1950, by drainage basins, for the conterminous United States and for each of the 17 western States and Louisiana. Separate maps are available. Report also includes data from the 1959 Census of Agriculture for land irrigated and acres and production of crops on irrigated land in the 18 conterminous States and Hawaii.

Volume IV-Drainage of Agricultural Lands-Statistics for States and counties and for the conterminous United States, presenting 1960 data on number, area, physical works, and costs for drainage projects of 500 or more acres by size, type, and year organized. Maps are ineluded.

## Volume V-Special Reports

Part 1.-Special Census of Horticultural Specialties-Statistics for States, except Alaska and Hawaii, and for the conterminous United States, presenting 1959 data on number and kinds of operations, gross receipts and/or sales, sales of specified products, inventories, employment, and structures and equipment.

Part 2.-Irrigation in Humid Areas-Statistics for 30 castern States showing 1960 data on acres irrigated, mumber of constructed ponds and reservoirs, source and method of applying water, type of pumping power, arreage of individual crops irrigated, and frequency of irrigation by States and counties.

Part 3.-Ranking Agricultural Counties-Statistics for selected items of inventory and agrieultural production for the leading counties in the United States.

Part 4.-Farm Taxes and Farm Mortgage-A cooperative report by the Economic Research Science, U.S. Department of

Agriculture and the Bureau of the Census, U.S. Department of Commerce, presenting 1961 data by States on taxes on farms, number of mortgaged farms operated by full owners and part owners, amount of mortgage debt held by principal lending agencies, and amount of interest paid.

Part 5.-1960 Sample Survey of Agriculture-Statistics by economic class and type of farm, showing 1960 data on farm-operator-family income from farm and off-farm sources; inventory and use of sclected types of farm equipment, tractors by year made and fuel used; number, size, and materials used for new buildings constructed 1958 to 1960 ; number of farmers having contracts with dealers, processors, or others for the production and marketing of 15 farm products; and real estate and non-realestate debts of farm operators and farm landlords by lending agencies.

Part 6.-A Graphic Summary of Agriculture, 1959-A cooperative report by the Economic Research Service, U.S. Department of Agriculture and the Bureau of the Census, U.S. Department of Commerce, presenting graphically for 1959 and prior census years some of the significant uses of agricultural land; the extent and nature of the variouskinds of tenure under which farms are held and operated; and changes and developments in the use of agricultural resources and production of agricultural products.
Special Publication-Principal Data-Collection Forms and Procedures: United States Census of Agriculture, 1959, and Related Surveys-Facsimiles of the enumeration forms used, slowing variations for the 50 States, Puerto Rico, American Samoa, Guam, and the Virgin Islands, together with brief descriptions of the census field procedures for the census and the related surveys.

39.-Vegetables grown under glass and propagated mushrooms, for all establishments with a crop value of $\$ 10$, 000 or more- establishments reporting, area, and value of sales at wholesale prices, by divisions and States: 1959. ..... 181
38. -Horticultural specialties-Establishments, sales, employment, land, structures, and equipment: Censuses of 1959 and 1949
39. -Cut flowers, flowering and foliage plants (including cacti and succulents), bedding plants, and cultivated florist greens- Establishments reporting, quantity sold, and value of sales, by counties: Censuses of 1959 and 1949
3.-Nursery products-Establishments reporting, quantity sold, and value of sales, by counties: Censuses of 1959 and 1949 4.-Bulb crops-Establishments reporting, quantity sold, and value of sales, by counties: Censuses of 1959 and 1949
5.-Vegetables grown under glass and propagated mushrooms-Establishments reporting, quantity sold, and value of sales, by counties: Censuses of 1959 and 1949 (County Table 4 in Delaware, Indiana, Massachusetts, Missouri, New York, Ohio, and Pennsylvania)

INTRODUCTION
(IX)

## INTRODUCTION

## HORTICULTURAL SPECIALTIES

History of the Census.-The Special Censiss of Horticultural Speciaties was taken as part of the $19 \% 9$ Census of Agriculture. This Special Census included producers of cut flowers, flowering and foliage plants (includins cacti and succulents), bedding plants, and cultivated florist sreens: nursery products; bulb crops; flower seed ; vesetahles grown under glass and propagated mushrooms for 48 states comprising the conterminous United States. Hawaii and Alaskil were not included in this sperial Census. Detailed data on the production of flowers, foliage plants, etc., in Hawaii are given in State Table !, Part 50, Hawaii ; and limited data on the production and sale of greenhouse, hothouse, and nursery products are siven for Alaska in Part 49 , of Volume I of the reports for the 195 Census of Agriculture.

Establishments included in the Special Census were also included in the gencral census of agriculture taken in the fall of 1959.

Farms and establishments producing flowers, bulbs, nursery products, and regetable and flower seeds have always been included in the periodic general censuses of agriculture. However, the number of inquiries relating to horticultural specialty products on the questionnaire for the general censuses of agriculture has been limited to less than six. Therefore, a limited amount of data on horticultural specialty products has been published in the reports of the periodic censuses of agriculture. Special censuses of horticultural specialty production have been taken only in connection with the Censuses of $1890,1930,1950$, and 1959 . The lesults of the special censuses prior to 1959 appear in the following Census reports :

1890 Volume IV Statistics of Agriculture in the U.S. Eleventh Census, 1890
1930 Fifteenth Census of the U.S. : 1930 Horticulture Statistics for the United States and for States, 1929 and 1930
1950 Volume V, Special Reports, Part I, Horticultural Specialties

Legal Basis for the Census.-The 1959 Census of Agriculture was authorized by an Act of Congress, as were all prior censuses of agriculture. "Title 13, United States Code-Census," eodified in August 1954, and amended in August 1957 and September 1960, is now the legal basis for censuses of agriculture and other censuses and surreys conducted by the Bureau of the Census. Section 142, paragraph (a), of Title 13 makes procision for the Ceasus of Agriculture.

Period Covered by the Census.-The Special Census covers, in general, operations for the calendar year 1959 ; however, a small portion of the establishments which maintain their records on a fiscal-year basis, and which were unable to report on the cat-endar-year basis, were permitted to report for the fiscal year that included at least one-half of the calendar year, 1959. Regariless of the year used, data on employment and structures and equipment were to be reported for the period specified on the questionnaire.

Questionnaire Used for the 1959 Census.-Only one questionnaire was used for the 1959 Special Census of Horticultural Specialties, whereas four questionnaires were used for the 1949 Census. In 1949 a separate questionnaire was used for each
of the four major horticultural classifications. (Vegetables grown unter glass and propagated mushrooms were included on the questionnaire with cut flowers, potted plants, etc.) The questionnaire for $19 \pi$ contatins 114 inquiries on products, value of sales, expenditures, employment, and structures and equipment, in addition to the number of plants in production during 1959 , and the anticipated plantings in 1960 for five cut flowers, and the inventory of eight classes of nursery products. The questionnaire was prepared after a field test of the promosed inquiries. A facsimile of the questionnaire appears in the Appendix of this report

Under the Census definition of a farm the production of horticultural specialty produets is considered as a farm operation, and farm census enumerators were required to obtain an agriculture questionnaire from such establishments. The questionnaire for the 1959 Census of Agriculture contained the following four inquiries regarding horticultural specialty products:

## ENUMERATION PROCEDURES

Obtaining Lists of Growers.-The enumeration for the 1959 Special Census of Horticultural Specialty establishments was conducted, largely, by mail. During 1959 , lists of producers were ontained from State Departments of Agriculture. From these lists a master list was prepared containing the names of approximately 36,000 horticultural specialty establishments. Even though much time was spent in screening lists for nongrowers, such as retail florists, landscape contractors, garden center operators, and others, these lists were found to include many establishments not engaged in growing and selling $\$ 2,000$ or more of horticultural products in 1959.

Mail Enumeration.-In December 1959, ropies of the horticultural specialties questionnaire were mailed to all establishments on the mailing list. Three subsequent follow-up mailings were made to establishments from which no reports had been received.

Field Enumeration.-Hy means of a followup by telephone and further correspondence. it was possible to obtain by mail completed reports from all except about 10 percent of the growers appearing on the original list. Arrangements were made for State statisticians of the Agricultural Marketing Service of the U.S. Department of Agriculture to
 of thair staff or uthers to obtain requents from establishments: from which questimanares had not hean remedea. This prowethare resulted in the ohtainins of reprote for all exepot a feew establishments produring and selling horticultural sjecialty prodbuts of $\$ 2.0$ (M) or more Estimates were made for the fers establishments for whirb it was not possible to obtain reports.
Insuring Completeness of Coverage.-The mailing list containing the 3 afono nathes for horticultural specialty establishments was provided to 'rnsis enumerafors and rew leaders for use in ehockine the completeness of the conerage of such estathishments for the 19s: Census of Agriculture. During the feriod of emmeration, warh farm rensus emmerator was instrueted to whain an amrioulture questiomaire also from ans grower in his Pmaneratiom area whese mame was not on the slecial list. Thus, any grower not on the list was also asked the four questions pertaining tu hortioultural specialty erops on the agri"ulture questionnaire. Sulserguentls, Auring the processing of the agriculture questionnaires, abother list showing the name and atthess of farm oparator amb the information repmetal on the atericulture duestimmaire was prepared. This list was the diket against the list of horticultural specialty estabishments. Questiomutires were then maled to horticultural specialty establishments listerd in the 190! Census of Agriculture but which were
 on the original list, only 14 , ofo growers were flualitied for the

Crops Covered.-Growers of Christmas trees, willectors of mative pants, turf or sod growers and produrers uf vegetahle seeds were not induden in the sperial Cemsus. The sate of forest trees
 momeripes, sull as those operated hy monicipal, State and f.S.

The momber of impuries regarding suedifu "rops on the questionmare was limited. Some erope fur which there was a soparate infuiry in 194t were "ither combined with another crop, or other similar crop, or were combined as "All dether" in a particular eron
 ingtiry for 1601), but whinh were combrined with other (rops for

Reporting of Firms Having More Than One Growing Location,batal for produrers of lorticoltural specialty crops are given in this report by the comanty in the State in which the crops were promberd. Whan a grower had production in several combties, all data for his cperation in all counties were tabulated ant published for the county with the ereatest proturtion area, When a grownr had the sabue amoment of production area in two or more comutios within a siate, the data were tabulated and published fur the county in which the sales office was locaterl.

An "perator with srowing operations in more than one St: to was replimed to fill font a separate questionnaire covering opeat tions in eath stale where the products were podnced. The producer was required to report the produets on a separate question-
naire in the state where produced even though all products were marketed from a ecntral location.

Comparability of Data From Prior Censuses.-While fitrms or establishments producing tlowers, bulbs, nursery products, and vegetable and flower sterds have alwass heen inchuded in the general census of agriculture, detailed data regroming these types of agricultural produrtion have been ohtained in a special census
 of Agriculture. Comparative data are given in this report only for the sperial remsuses taken in 1900 and 19mo.

Data for the various special censuses me not fully comparable becanse of-

1. Differences in Coverage - The 195: Special Cemsins inelnded only establishments producing and selling horticultural specialty products with a total sales value of seonk or mores. Abproximately 19,0 be fams broduring and selling lase than $\$ 2,000$ of thowers, nursery products, bulls, veretahles, and flower seeds were excluded from the Sperial Census. In 1! ono, the sperial Census included only establishments producing and selling horticultural broducts with a value of $\$ 1,000$ or more. lu the 1930 Special Cemsus all establishments having any sales were inchaded, provided these places were classitied as farms in the Census.
2. Differences in Reporting Value of Crops Sold.-In 1059, the value of each (rop sold represents the value of the crop as sold: some of the sales were at wholesale prices and others were at retal prices. For the 10.00 special Census, the value of crops sold was ablenated at wholesale prices, wan though part of the sales were made at retall prices. For the 1930 Special Census, the value of rops sold remosentis sales as they were made : some at wholesale prioes and others at retail prices.
3. Differences in Counting Establishments Growing More Than One Group of Horticultural Specialty Products.-In I!So, an establishment growing more than one sroup of products, i.e. cut flowers, nursery prodncts, bulbs, flower seeds, ete, was counted as a single estabishment. In 1050, an establishment growing more than one group of hortiantural shecialty products was counted as a separate establiwment for eath group of horticultural products sold. For example, an establishment producing and selling cut flowers and also bulls. was comed twice-once as an establishment for cut thowers and again as an extablishment for bulbs. The counting of the stame establishment for each gronp of horticnltural specialty products resulted in overstatement by 000 , or:3 percent, in the total mmo ber of establishments producing and selling horticultural siocialty products with a value of $\$ 1,4(M)$ and ower for $18 . \pi$. However, the procedure of reporting semately for carh gromp of horticultural products sold, did not affert ans statistios wher than number of establishments as figures on crops sold, employment, expenditures, and strustures and equipment were included only once in the special Census.
4. Differences in Period to Which Statistics Relate.-For the 1959 Census, data on employment relate to the pay period nearest to November 15, 1909, while for 1500), the dat: on employment relate to the pay period ending nearest March in. 1949.

Comparability of Data Obtained in the 1959 Census of Agricul-ture.--The data obtained in the 1959 Special Census of Horticultural specialties are not fully comparable with the 1909 Census of Agriculture. In addition to including the sales value and number of establishments for farms produring $\$ 2,000$ or more of total sales, the rensus of agriculture also includes data for all farms moducing $\$ 2,0$ or more in 1959 if the place was less than 10 acres in size, or $\$ 50$ or more if the place comtained 10 or more acres.

However, data are given in Comety Table 12 of Volmme I of the reports of the 1959 Censns of Asriculture for horticultural specialty farms selling spou0 or more of horticultural specialty products in 1959.

The sales of vegetable seeds and the sates of mursery prownets from finms aperated by exwermmental asoncies (Lnited states,
 but were not inconded in sales drow the Sperial Consus.

Reliability of Data.-The questionmaires rederved from the individual growers were thoroughly eherked during the editing gromess. All questionalate entries wore reformed to and examinad by terdinixal leersommel. All questamabla items were verified or corrected by matas of corresponderne or telephone calls. Some 'flestionnaires were returned to the field wheres emmerators somght further information from showers. It is believal that the roverage of establishments is appraximataly 10 pereant complete beroance of eladering of lists of astablishments ohtained from mans sources and the rherking of all lists against the 19-nt Census of Arriculture.

Approximatels ? percent of the total sales value of prodncts grown was estimated by techmical persommel becanse of insutheiont fuformation on the questionmares summitted for some establishments. Wistimating wats required primarily for guantity uf crops sold and the valne of erops suld. Wetimates were based on reports of other growers within the same area of prombetion. state rertitioation reports received by the U.S. bebartment of Agriculture for prion rears and data obtained from the 1and census of Agriculture were also used in making estimates for individnal establishments.

Many growers had inadernate records from which to obtain the information being songht by the Census. While the chassification of drops on the phestionnaire was clearly detined, some growers fialed to apportion their fotal sales to the raps which were grown and sold by them. The growers who speciatized in the produrtion of one or a fen (rols did not lave difficulty in providing the required information. Most large growers, whether or mot they had erop sperialization, provided detailed data as to fuantity sold and value of sales for individnal crops. Small and medimm-sized growers growing a large variets of items fonmd it difficult to allowate sales to individnal prodnets.

Most growers were able to separate their total sales to indicate sales mate at retail and at wholesale, but some had difficulties in separating such sales for each product they suld.

In sonne instances it was diffionlt to obtain reports for each State in those "ases where probucers had growing operations in more than one Stater. sometimes sales for more tham one state were made from only one lowation. Therefore, it was difficult for the grower to differentiate between that which was grown and that which was sold in the two lowations, as many producers kept only one set of books.

Cortain growers did not report correctls their erops to conform with the Censns classification. The following represents extmples of some of the froblems regarding the classification of erops:

Some growers intieated bulb sales of lilies, gladioli, and peonies in the cut thower section of the questionatire. Names of crops were written on the questionnaire in reply to "All other" ghestions belonging in one of the specile (rop items. Azaleas and rhododendrons were often "written in" rather than indicated in the item, "loroad-leaved evergrecus"; juniper and yews were often not classified by growers as coniferons evergreens. Nany peremmial plant growers did not list pants surh as phox aud delphinium as herbaceous pants.

In some instances it wats difficult to determine whether or not a grower was a flower grower or mursery grower. For example, a grower of chrysanthemmm flants conld be wassified aither as chrysanthemmm plant grower under section Hf of the questiomaire, or ats herbaceous plant grower in section $V$ of the guestionnaire. Similat reborting problems occurred in the case of gardenias ant azaleas as these two "rops can ler considered as brod-leaved evergreens in section $V$ as well as plants in section Ill of the questionnaire. Where growers reported
(fuestionable entries these products were tabulated in the appropriate section on the questimmaire that corresumaded to the probable ultimate use of the crops.

In some cases the mumber of plants sold and the sross sales figures for slecitic crops resulted in the transfer of a crop to the section of the questionnaire where the average grice reported was more nearly comsistent with what other growers in the same area were receiving for the same crop.

Some landscape deaters and garden center operators have acreage on which some of the material they sell is grown. Others buy all of their phanting materials. For such operators it was difficult to determine whether the reported crop was grown or had been purchased for resale. For such establishments and for some florists, total sales reported included receipts for services.

Mans establishments purchase flowering plants and liners for growing-on parpuses and hold them for rarying lengtis of time before resale. In the editing of questimmaires, blants that were purchased from other growers for resale were excluded whenever such operations were defected.

In some instances, couperatives and similar associations reportel products grown under contrat for them by other establishments. Comperative and other marketing associations were not indluded in the census.
Presentation of Statistics.-This report is comprised of an introduction amb six sections presenting the data ohtained in the 19.9 Sperial Census of Horticultural Sperialties.

Section I includes information bs kind of business, type of wwership, total sales, wholesale and retail sales, value of crops at wholesale prices, refurns and allowances, and cost of flower, nursery, and ballu stock purchased. Thata om employment, greenhonse area, lant area, and other structures and equipment are also given.

Sections II through VI pertain to specifie groups of profluets and contain data relating to mumber of growers, production and sales for sperified urns for each of the main classifications of horticultural crops.
The titles of these sections are:
Section 1.-Establishments, Sales and lurchases. Emphoyment, and Structures and Equipment
Section 11.-Cut Fhowers, Flowering and Foliage llants (In(luding Cacti and Suceulents), Bedding Plants, and CuItivated Florist Greens
Section IIl.-Nursery Products
Section IY.-Bulb Crops
Section V:-Flower Seed
Section VI. - Vegetables Grown Under Glass and lropagated Mushrooms

## DEFINITIONS AND EXPLANATIONS

Definitions and explanations are presented here for those items considered inadequately deseribed in the tables in which data are given. For exact wording of inquiries on the questionnaire and for instructions given on the questionnaire, reference shombd be made to the facsimile of the questiomaire in the Appendix of this report.

Establishment represents the queration or operations of an intividual owner, partnership, or corporation engaged in the produrdion and sale of hortiontural siecialty products in a State. If an establishment had production but made no sates during 1959 , it was not included in the remsus. If an operation was carried wit in several places within a State, all growing lowtions were comited as one establishment. If operations weres carriad out in more than one State, the uperation in each state was considered a sprarate extablishment, provided the sales totaled \$2.(\%) or more in each state. When the uperations of an estahbishment were in more than one State and separate reeords were not available for earh uperation, data for expenditures.
value of structures, ete., were prorated among the reports for the various states on the hasis of sales.
Kind of Business.-The operator of each establishment was asked to indicate the kind of business in which he was engaged. The instructions on the questionnaire were as follows:

Type of organization relates to the form of ownership of the business. Establishments were elassified as operated by individual proprietorships, partnerships, and corporations. The facilities used by each of the types of organization may be owned or rented.

Method of Sale-Operators were asked to report method of sale, i.e., whether their sales were made at wholesale, retail or wholesale and retail.

Total sales represent gross receipts or gross sales of all produets mrown and sold by the establishment during 1959 . It includes all retail and wholesale sales made by the establishment. In the ease of retail sales, and in some areas in the case of wholesale sales, the gross receipts represent receipts for services such as packaging, arransing, ete., and receipts from sales or other taxes eollected directly by the establishment from buyers as well as probuets sold. The total sales figure does not include sales of fertilizer, spray materials, garden tools, etc.

Wholesale sales inchute sales of products at wholesale prices. These sales may have been made to wholesale establishments or may have been sales made at wholesale prices to retail establishments.

Retail sales inchule the sales of products at retail prices.
Returns and allowances represent that portion of gross sales that establishments eounted as discounts and value of returned merehandise.
Cost of flower, nursery, and bulb stock purchased during 1959 includes all expenditures for flower, nursery, bulb stock, and seed purchased by estahbishments in 1950. The purpose of this question was to obtain the cest of flowers, mursery and other stock, and seeds purdiased for use for production purposes. However, some extablishments included the eost of items purchased for resale, berause of the inelusion of products for resale, the totals for this item may represent an overstatement of 5 to 10 perierent.

Value of crops at wholesale prices represents a calculated value of all crops sold. As erops were sold both at wholesale and at retal prices. the ralues of the part of the erops sold at retail wre converted to wholesale equivalent values. This calculation provided values of all products at the sane level of sate.

Total employment includis full-time as well as part-time or seasonal employees on the payroll of all establishments during the pay perion endhus nearest November 15, 1059. In many insfances dins does not represent the maximum number of employers hecamse of the seasomal mature of many businesses. Sales and othoe emplowas mot eommeded with the sale of horticultural sperianty prewhuts produced hy the extablishment were not included.

Paid full-time employment ineludes all hired emplosees in yearronnd or full-time positions. Salaried offerers of corporations are excluded.

Unpaid family workers consist of members of the operatores family who worked for the business during the tirst two weeks of November 19m, and who were not paid a wage ot salary. The operator of the business was not to be included.

Size of establishment refers to the classifieation of extablishments by size of operation based on the amomnt of total sales of all erops grown. Beause of the significant differences in art erations, kinds of produets sold, ete. between very small and larger establishments separate data are presented for establishments having less than $\$ 10,000$ amd $\$ 10,000$ or more total sales.

Value of land, structures, and equipment inchudes the valuc of land, structures, and equipment owned and/or rented by the business as of Janmary 1900 , and used for the production of hortieuttural specialty prombets. This figure does not include the ralue of products on band. The value was to lee estimated on the basis of value at which the land, etc, would sell in . Famury 1960.

Disclosure of data for individual establishments.-Data which would disclose the opration of an individual establishment are not published. In most eases, data are not published for less than three establishemuts. Data on the number of establishments are given, as figures on mumber of establishments are not considered as a disclosure. In county tables, data that would result in disclosure of information for individual establishments were ineluded with data for "All other counties." Footnotes on the tables indicate with which counts or groups the data not published have heen combined in order to avoid disclosure of information for individual establisliments.

Greenhouse area represents square feet of land eorered by greenhouse structures. The structures conld be covered hy glass or glass substitutes suel as fiberglass or specially prepared plastics.

Greenhouse Space Used in 1959 Classified by Use.-The elassification results in some double counting of greenhouse area as some establishments prodnce flower, mursers, and vegetable crops in the same greenhonse area during different months of the jear.

Bench and greenhouse area in which mist propagation was used includes only areas in which a slecial orerheat system of mist is used for the propagation of plants. The area given does not include any form of irrigation or method by whieh growing plants receive their water other than for propagating purposes.

Ornamental plants sold in containers refers only to number of plants. These plants are included also in the total sales for each kind of plant.

Inventory of number of plants, January I, 1960 intludes the total number of plants on hand (excluding liners and plants for budding and grafting ) on Januars 1. 1900.

Units of Measurement for Crops Sold.- Except for two eut flowers, pompon ehrysanthemum and gladiohns. the ummber of horticultural specialty crops sold is wiven in number of plants. Pompon ehrysanthemums are given in bunclies and gladioli are reported in dozens. I'nits of measurement are not given for Asparagus phmosus, cacti and sucrulents, foliage plants, bedding plants, and items listed in the" "1ll other" eategories.

## Section I.-ESTABLASHMENTS, SALES ANT PlRCHASES, EMPLOYMENTV, ANU STTRUCTURES AND EQUPPMENT

Agricultural Importance of Horticultural Specialty Establish-ments.-Farms reporting horticultural specially crops in the $\mathbf{1 9 5 9}$ Census of Agriculture accomited for $\$ 613.209 .319$ or 2 percent. of the value of all farm products sold.

There were 16,972 farms reprting nursery products in the 48 conterminous States for the 19.9 census of Agriculture, relt resenting 0.5 percent of all farms, and the sales of nursery produets on these farms totaled $\$ 198,726.175$, and represented 0.7 percent of the value of all farm products sold. Furms reporting
flowers and flowering and foliage plants totaled 202.208, or 0.6 percent of all furms, while farms reporting vegotables grown under glass, dowev and vegetable seeds. lmalbs, and mushrooms: totaled 10,364 , or 0.3 pereent of all farms. The value of sales of flowers and tlowering and folisuge plants was \$927, fow itity or 1.1 percent of the value of all farm prolucts sold, and the value of vegetables grown under glass, flower and vegetable seeds, vegetable plants, bulbs, and mushrooms was $\$ 56,857,270$, or 0.3 percent of the value of all firm products sold. The value of all hortiroultural sperialty brombets sold repesented more than 5 pereent of the value of all farm products sold in eight States (Rhode lslum, Massachusetts, New dersey, Comecticut, Pemmstyania, klorita, Ohio, and New York).

Number of Establishments.-There were 17,909 establishments wilh sales of $\$ \mathbf{\$}, 000$ or more of hortionltural syecialty crops included in the 1959 special Census. Establishments reporting (ut llowers, flowering and foliage plants (including eacti and succulents), bedding plants, and cultivated florist greens totaled 11,772 ; establishments reporting nursery broducts, 6,757; establishments reporting bulbs, 861 ; and establishments reporting flower sead, 85 . Establishments reporting greenhouse vegetables totaled 819 , and establishments reporting propagated mushrooms, 665. Some of the 17,099 establishments reported more than one of the major groups of horticultural specialty products.

California accounted for almost 10 percent of all establishments with 1,788 establishments reporting horticultural specialties. Pennsylyania was second with 1,766 establishments. The 7 states with the largest number of establishments accounted for over 50 pererent of all establishments.

NUMBER OF ALL HORTICULTURAL SPECIALTY ESTABLISHMENTS BY STATES: 1959

Kind of Business.-There was a total number of 17,999 establishments counted as producing and selling $\$ \mathbb{L}, 0 \ldots 0$ or more of horticultural specialty products in 1989. The following represents the number of establishments for carla of the principal kinds of businesses:

Some operators indicated that they were engaged in the production of more than one group of horticultural erops. The total of the number of estallishments liy kind of busimess exteeds the number of establishments by $\mathbf{2}, 260$. or 16 peremt. The data on ralue of sales by kind of establishment represent the sales of eaeh of the six groups of horticultural specialty products by all extablishments and not the ralue of sales of establishments reported as flower growers, nursersmen, etc.

Type of Ownership.-Orer two-thirds, or 69.7 percent, of all establishments were operated by individual proprietors. Partnerships comprised 19.4 percent, while corporations operated 10.9 percent of horticultural specialty estabtishments.

| Type of ownership | Number of establishments | Percent distribution |
| :---: | :---: | :---: |
| Total | 17,999 | 100.0 |
| Individual proprietorships | 12, 534 | 69.7 |
| Partnerships-- | 3,502 | 19.4 |
| Corporations...- | 1.958 | 10.9 |

Size of Establishment.-Orer one-half, or percent, of the total number of establishments reported nearly 98 percent of total sales. The remaining 48 percent of the estabhishments comprised establishments that had sales of less than $\$ 10,000$.

[^0]
## DISTRIBUTION OF THE NUMBER OF ESTABLISHMENTS AND TOTAL SALES BY SIZE OF ESTABLISHMENT FOR THE CONTERMINOUS UNITED STATES: 1959 <br> [Establishments reporting $\$ 250 . \$ 1,999$ of horticultiral products on the 1959 Census of Agriculture are included]

Farins having sales of less than $\$ 2,000$ of horticultural specialty protucts probably acoount for less than 3 percent of the total sales. Data from the Special Census of IIorticultural Sperialties show that establishments having sales of $\$ 2,000$ to $\$ 9,990$ areomit for only 7 percent of total sales for all establishments in $1!59$.

Sales and Values of Crops by Kind of Crops Sold.-The total value of sales for all horticutural establishments was $\$ 584,751,415$, in 1059 . Wholesale salles acconnted for 74.4 pereent and retail sales, 25.6 percent of the total. The value of crops sold calculated at wholesale mides totaled $\$ 515,081,277$. Califoruia and lemmsybania were the two leading states in total sales and in value of all erops sold at wholesale prices. 'Ihese two States accomited for 24.5 percent of total sales and 25.9 percent of the vatue of (rops sold at wholesale prices. States next in order of importance, by total sales, are Ohio, Florida, New York, Illinois, New Jerseg, Michigan, Massarchnsetts, and Texas.

Cut flowers, flowering and foliage plants (including "acti and succulents), berlding plants, and cultivated florist greens acconnterl for $\$ 292,302,771$, or 56.7 percent of the value of all crops at wholesale prices. Nursery products accomeded for 30.2 percent of this total, while sales of bulb farms amounted to $\mathbf{1 . 9}$ percent of the value of all horticultural specialty erops abenlated at wholesate prices. Fhower seed represented 0.5 percent of the total while regetables grown under glass and propagated mushrooms adoomnted for $R . S$ percent and 6.9 percent, respectively, of the total value of all horticultural specialty products.
retail sales, wholesale sales, and value of all horticultural specialty crops at wholesale prices, for all ESTABLISHMENTS, BY STATES: 1959

[States are ranked in order by total sales]

${ }^{1}$ Includes District of Columbia: Total sales $\$ 112,268$, wholesale value $\$ 28,064$.
2 Less than 0.05 percent.

VALUE AT WHOLESALE PRICES FOR ALL HORTICULTURAL SPECIALTYCROPS SOLD, BYKINI OF CROP, FORTHECONTERMINOUS UNITED STATES: 1959

| Crop | Value of sales at wholesale prices | Percent distribution |

Returns and Allowances and Cost of Flower, Nursery, and Bulb Stock Purchased.-Returns and allowances, which included discounts and value of returned plant material, totaled $\$ 5,205,920$, and represented less than 1 percent of total sales. Flower, nursery, and bulb stock purchased by growers totaled \$95,313.734 in 1959.

Employment.--There were 110.349 persons who were on the payroll ending nearest November 15. 1959. The total employment
in November 1959, of horticultural specialty establishments was 120.515 . This total does not include the operators themselves. Of the total, 46,985 were part-time or seasonal persons, 63,361 persons holding year-round or full-time positions, and 10,166 unpaid family members.

Establishments having a crop value of $\$ 10,000$ and over accounted for ss percent of the total number of employees although they accounted for only 61 percent of the number of establishments reporting employment in 1959.

Structures and Equipment.-The value of all land, structures, and equipment owned and/or rented by horticultural specialty establishments was $\$ \mathbb{\$ 4 . 6 7 7 . 8 5 6}$ in January 1960 . The total was 44 percent greater than in 1949 . The average per establishment was $\$ 45,81 \mathrm{~S}$ in 1900 , as compared with $\$ 25,599$ in $194 \%$. The bench or greenhouse area in which mist propagation was used totaled $8,086,675$ square feet. (ireenhouses were reported by 11,933 establishments and had a total area of $227.674,935$ square feet. Nust of this greenhouse area was covered ber glass, but 8.6 percent of the area was covered by a glass substitute such as plastic or fiberglass. The four states baving the largest greenhouse area were Ohio, Califurnia, New York, and Pemnstvania.
['ounties are ranked in order by total sales]

| County | Rank | Number of estab-lishments | Total sales (dollars) | Value at whotesale prices (dollars) | County | Rank | Number of estab-lishments | Total sales (dollars) | Value at wholesale (doliars) |

## NA Not uvailable.

Totid does not equal sum of area by kind of comprown. Ste text.
GYe four-fifths of the greenhouse areal was nog primalily for the production of ent flowers, flowering and foliage phats, ete. Abont if percent was used for greonhonso vogetahle crops, ant t peraxat, for marsery pronturfs.

There were 10,708 establishments reporting 192,668 acres for the ont dar production of lorticultural products in 1959. Aereage used for the prothetion of mursery (rops acomonted for 71.5 percent of this area. Cut thowers, flowering iml foliage plants, florist srexns, etce, ateounted for 21.5 pereent and hulb erops and
 area.

Land covered ly frommes totaled $42,007,004$ square feet in 1959. This area imelodes hot bod and cold frame wrea used in the production of fower, nursory, ;and bulb (rols. Framw area increased almost 100 percent since 1949 . The arear rovered by choth house
 lath, saran, or other shade substitute material was $121.601,004$ square feet in 1950. The siquare feet area covered by frames, cloth honses, lath, saran, and ofler shade shostitute material is included in total lamarea ared for ontdoor production in 19 ato.

GREENHOUSE AREA USED FUR GROWING ALL HORTICULTURAL SPECIALTY PRODUCTS BY STATES: 1959

OUTDOOR ACREAGE USED FOR GROWING ALL HORTICULTURAL SPECIALTY PRODUCTS BY STATES: 1959

## Section II--CUT Flowers, Flowering and foliage PLANTS (INClUDING CACT AND SUCCULENTA), BEDDING PLANTS, AND CULTIVATED FLORIST GREENS

There were 11, ita establishments engaged in the production of cut flowers, flowering and foliage plants (including racti and succulents), bedding plants, and cultivated thorist greens in 1959.

There was a smaller number of establislments reporting for most of the major linds of ent flowers and potted pants in 1959 than in 1949. The munber of cot pompon chrysanthemmen growers was a fourth less in 1959 than in 1949 while the number of establishments growing gladioli in 1959 was a third less than in 1949. The only crops with a larger number of producers in 1959 thau iu 1949 are cut orchids and asters, potted geraniums and poinsettias, and bedding and vegetable plants.

The value of all flower products calculated at wholesale prices totaled $\$ 292,302,771$, and represented 57 percent of all horticultural specialty proflacts grown and sold in 195!. Unpotted plants, rooted cuttings, ete., comprised $\$ 7.586,152$, or 19 percent of the calculated wholesale value: potted plants, $\$ 9.066,448$, or 33 per-
cent of the wholesale value; and eut flowers and foliage, $\$ 142,640,171$, or 49 precent.

The following table shows the rank of all foricultural crops according to valne at wholesale prices for three groups: (1) Unpotted plants, rooted cuttings, etc.: (2) ported plants: and (3) rat flowers and foliage in 1959 and 1949.

While there was a general increase in the value of most hortieultural specialty profucts, the value at wholesale prices of all potted plants inereased over 150 percent from 1949 to 1959. The ratio of cut flowers to the valne of all flower products declined significantly during the 10-year period 1949-1959. Cut flowers represented dos percent in 194, as compared to 49 percent in 1059 of the wholesale value of all flowers, flowering plants, etc. Potted plants rejresented 19 percent in 1949 as compared to 33 percent in $195 \%$ of the wholesale valne of all flower products.

The value at wholesale prices for foliage plants sold exceeded that of any other flower products in 1959 and represented 27 percent of the value for all potted plants sold. In importance as measured by value of the crop, at wholesale prices, geranium plants ranked second and ehrysanthemum plants, third.

RANK OF CUT FLOWERS, FLOWERING ANI) FOLIAGE PLANTS (INCLUDING CACTI AND SUCCULENTS), BEDDING PLANTS, AND CULTIVATED FLORIST GREENS BY VALUE AT WHOLESALE PRICES, FOR TIIE CONTERMINOUS UNITED STATES: 1959 AND 1949

[^1]The value of cut thrisanthemums represented one-fourth of all cat flower sales. If the two groups of cut chrysanthemums are comsidered reparate flower crobs, then roses continue to rank first in cut flower sales, accoming for $\$ 30,942,064$, or 22 percent of value at wholesale prices for all cut flowers sold. Carnations rank second with :21 lercent while pompon chrysanthemums are third with 13 percent of rut flower sales. Standard, Fuji, and spider chrysanthemums account fur 12 percent while giadioli and
cut eattleya orchids represent 11 percent and 4 percent of all sales at wholesale prices. respectively.

The following table indicates the value at wholesale prices of many related moducts listed as separate items on the questionnaire. The values of related crops have been combined to show the importance of each kind of crop regardless of whether the cron was sold as propagating material, as potted plants, cut flowers, or bulbs, ete.

VAIUE AT WHOLESALE PRICES OF RELATED PRODUCTS GROUPS INCLUDED IN TWO OR MORE CLASSIFICATIONS: I959

[^2]undur broad-laved evergreens.
${ }^{3}$ I) ars not include azalea plants which are included in the nursery products section as lining out stock or as hroad-leaved evergreens.

## Section III-NURSERY PRODUCTS

There were 6,757 wstahlishments with nursery operations hav-
 50) mreent wreater that the mamber of mursery establishments in 1949. The incratise in the number of ourators srowing whamental plants aroounted for a large batt of the increase in the total number of nursery astablishments.

The value of all norsery stork suld calleutated at wholesalle
 horticultural smecialty products grown and sold in 1959. Grmat
 value at wholesale prices of all mursery froducts sold in 1959.

Decidnous fruit and nut frees and graperines accounted for

 Eath of these wrombs of mursery products comprised about 5 perent of the value at wholesale priees of all mursery products. The value of small fruits such as strawberries, raspberries, and
 of the value at wholesale prices for all nursery products.
'The following talle indicates the rank of all nursery crops aroording to value ill wholesale frices for (1) lining out stock; (2) ornamental llints: (i) feciduons fruit and mut trees, grapeVinos, ritrus and subtrobical fruit trees, and small fruit plants ; (4) citrus and subtropical fruit trees : and (5) small fruit plants.

| All other. |  | 95, 330 | 2.3 |  | 277,074 | 11.0 |

The value of ornamental evergreens comprised over two-thirds of the value at wholesale prices of all lining out stock. The vatue of coniferous evergreens comprised 2 percent while broad-leaved evergreens comprised 27 percent of the value at wholesale prices of all ornamental plants. Deciduous shade and flawering trees and rose plants were next in importance acomoting for 14 percent and 13 percent, respectively, of the value at wholesale prices of all ornamental piants.

The value of peach and apple trees :acounted for $2 f$ percent and 21 percent, respectively, of the value at wholesale prices of all deciduons fruit and nut trees and sripevines. Nut trees, third in importance in this group, accounted for 18 percent of the total value at wholesale prices.
The value of orange trees accounted for three-fourths of the value at wholesale prices of all citrus and subtronical fruit trees. Strawberry phants accounted for 87 percent of the value at wholesale prices for all small fruit plants sold in $19 \%$.

The fer-unit ralue at wholesale prices of most flowers remained unchanged during the 10 -year beriofl. On the other latand, the average per-mit value at wholesile prices for most mursery fromuets increased. For example, the average per-unit ralue at wholesale prices, for a broad-leaved evergreen inereased from $\$ 0.81 \mathrm{in}$ 1949 to $\$ 1.03$ in 1959 while the average per-unit value for coniferous evergreens increased from $\$ 1.51$ to $\$ 1.97$, and shade and flowering trees from $\$ 1.21$ to $\$ 2.24$ from 1949 to 1959.
Broad-leaved evergreens intlude rhododendrom, azalea,
camellia, and similar crons but do not inelude subtropical ornamental plants produced largely in Florida and California. "All other ornamental plants" indude subtropical ornamental plants, such as crotons, palms, and ground covers grown outdoors as mursery erons in many of the Somthern States.

The figures for forest tree seedlings do not represent the total production of stheh seedlings as many nurseries onerated by the Federal and State Govermments were not included.

## Section 1V.-BULB CROPS

There were 861 bulb establishments included in the 1959 Special Census of Horticultural Specialties.
Sales of bulb erops totaled $\$ 9.363,663$, and represented only 1.9 percent of the value at wholesale prices of all horticultural specialty products in 1909.
Separate data for amarsllis bulbs, anemone roots, calla lity bulhs, canna roots, freesia corms, hyacinth bulls, muscari bubbs, and rimunotus tubers are not siven. These datal have been combined with "All other bulbs, corms, etc:" The tender and hardy varieties of narcissus have also been combined as one crop, "narrissus."
The following table indicates rank of bulb arous according to the value at wholesale prices in 1959. Wata for 1949 are given for comparative purposes. Gladiolns corms and lily (longiflorum or Easter) bulbs were the only two crops with a value at wholesale prices of $\$ 1,000,000$ or more in 1959.

RANK OF BULB CROPS BY VALUE AT WHOLESALE PRICES FOR TILE CONTERMINOUS UN1'TED STATES: 1959 AND 1949

## Section V.-FLOWER SEED

There were 85 producers of flower seed in 1900. In 1909 growers produced seed valued at $\$ 2,502,824$. California accommed for so percent of the value at wholesale prices of all tlozer seeds sold.

Detailed data are not available for begonia, delphininm, larkspur, and nisturtitum seed in 1959. Data for these crops have heen combined in "All other" flower seed. Petunia (regular) and petunia (fancy or clouble) are combined as "l'etunia." Snapdragon (regular) and suapdragon (hybrid) are combined as "Snapdragon."

The following table indicates the rank of all flower seed crops according to the value at wholesale prices for 1959 and 1949.

RANK OF FLOWER SEED BY VALUEAT WIIOLESALE PRICES, FOR T11E CONTERAINOUS UNITED STATES: 1959 AND 1949

Section Vl.-VEGETABLES GROWN UNDER GLASS AND PROPAGATED IIUSHROOMS

There were 819 establishments reporting greenlouse vegetable crops, and 665 establishments producing propagated mushrooms in 1959 . The number of farms prolucing propagated mushrooms has increased about 50 percent since 1949 .

Greenhouse vegetable crops and propagated mushrooms accomited for $\$ 5 \overline{5}, 316,062$, or 11 percent of the value at wholesale prices for all horticultural specialty products in 1959.

The following table indicates the rank of all greenhouse vegetable crops and propagated mushrooms, according to value at wholesale prices, in 1959 and 1949.
